

Pozdravni govor predsednika UKS / Welcome speech

Drage kolegice, kolege, dragi prijatelji,

Zadovoljstvo mi je da Vas u ime UO Udruženja kardiologa Srbije pozdravim i poželim Vam dobrodošlicu na XXI Kongres Udruženja Kardiologa Srbije, koji se održava od 19-22. oktobra 2017 godine na Zlatiboru. Ovaj kongres predstavlja finale dvogodišnjeg rada ovog rukovodstva UKS. U susret ovom važnom kardiološkom događaju u Srbiji, želimo da Vam skrenemo pažnju na neke od realizovanih ciljeva postavljenih za ovaj period.

S jedne strane treba spomenuti unapređenje regionalne, evropske (EORP, ATLAS projekat) i svake druge internacionalne saradnje, podršku mladim lekarima za odlazak na ESC i druge kongrese od internacionalnog značaja, organizaciju Svetskog dana Srca 2016. i posebno 2017. godine kada su bili uključeni kardiolozi iz više od 15 gradova Srbije, realizaciju postojećih kongresa radnih grupa Udruženja kardiologa Srbije i internacionalnih ogranaka (PRACIS, KIS i BASICS) uz pokretanje novog simpozijuma UKS (iNOVAacija znanja u Kardiologiji) čiji je cilj da skrene pažnju na najaktuelnije kardiološke teme i mogućnosti njihove primene u Srbiji.

S druge strane, treba istaći jačanje infrastrukture i organizacije samog Udruženja, pokretanje KME i seminara u gradovima Srbije preko podružnica UKS, inovacije internet sajta www.uksr.rs otvaranjem edukativnih platformi i za lekare i pacijente, uključivanje radnih grupa u aktivnosti UKS putem prevoja preporuka i pokretanja edukativnih programa, pa sve do najnovije inicijative za pisanje knjige Kardiologa 2018-2019 koja bi zadovoljila aktuelne potrebe kardiologa Srbije i čiji bi autori bili nastavnici i saradnici svih univerziteta u Srbiji.

UKS nastavlja tradiciju dodeljivanja nagrada mladim kardiolozima, i to za klinički rad „Prof. dr Dejan Bošković“, interventnu kardiologiju „Prof. dr Srećko Nedeljković“, a takođe obnavljamo i dodajemo zvaničnim nagradama UKS nagradu za naučni rad „Doc. dr Aleksandar Popović“.

Zahvaljujući trudu i izuzetnoj efikasnosti Katedre za Kardiologiju Medicinskog Fakulteta Univerziteta u Beogradu i Radne grupe za Valvularne mane UKS, tokom svečanog otvaranja predstavili smo i dva džepna izdanja preporuka Evropskog udruženja kardiologa iz 2017. godine za STEMI i valvularne mane. Nekoliko kompletnih prevoda ESC preporuka će biti objavljeno u našem časopisu „Srce i krvni sudovi“.

Naučni program je bogat sadržajem jer pokriva sve aktuelne kardiološke teme. Program će se odvijati u šest kongresnih sala, ove godine nazvanih po velikanima zlatiborskog i užičkog kraja. Izražavamo veliku zahvalnost na podršci svim organizatorima i predlagačima sesija i autorima koji su poslali svoje originalne radove. Posebno smo ponosni na zajedničke sesije sa kolegama iz regiona, ESC, SANU, udruženjima drugih specijalnosti, organizacijama i institucijama. Tokom prethodnih godina, UKS je uložilo mnogo truda i strpljenja na podizanju svesti o neophodnosti saradnje i podrške na svim nivoima, uvažavajući druge inicijative i mišljenja, sa jednim ciljem da se podigne srpska kardiologija na viši nivo da bi prevencija, dijagnostika i lečenje pacijenata bilo uspešnije, a sredina perspektivnija za lekare i druge medicinske radnike. Zbog toga, vizuelni identitet kongresa je zelena boja Zlatibora koja simboliše mir i prosperitet i šara tipičnog krova etno zlatiborske kuće koja simboliše UKS kao krovnu organizaciju svih lekara i saradnika koje se bave kardiologijom, uz krugove koji predstavljaju sve nas koji se krećemo u pravcu zajedničke zdravstvene misije.

Izražavamo zahvalnost svim farmaceutskim i kompanijama za proizvodnju medicinskih sredstava na velikoj podršci i razumevanju povodom ovog kongresa, kao i tokom prethodne dve godine. Očekujemo da će saradnja u budućnosti biti još uspešnija.

Želim Vam prijatan boravak tokom kongresa, interesantan naučni program i dobro "après-ski" druženje.

S poštovanjem,
Prof.dr Branko Beleslin, u ime UO UKS
Predsednik Udruženja Kardiologa Srbije

Fudbalska legenda Bobi Charlton je jednom prilikom rekao da će ti publika oprostiti ako šutiraš i promašiš ali ti neće oprostiti ako imaš priliku a ne šutiraš!

Dear colleagues, dear friends,

On behalf of the Board of the Cardiology society of Serbia (CSS), it is my pleasure to wish you a warm welcome to XXI Congress of the Cardiology society of Serbia organized from October 19-22, 2017 on Zlatibor. The congress is as well the final step of the two-year-long work of this Society board.

Before this very important event for the cardiology in Serbia, we would like to stress a few realized goals that had been set.

First, these are the improvement of regional, European and any other form of international cooperation, the support of young doctors to attend ESC and other conferences of international importance, the organization of the World Heart Day in 2016 and 2017 when the cardiologists from more than 15 Serbian towns took part, the realization of existing conferences of the Working groups of the CSS and the branches (PRACIS, KIS and BASICS) as well as starting up the new conference of the Society (Innovations in cardiology - NOVA-K) whose aim is to focus on the latest cardiology topics and the possibilities of their implementation in Serbia. Second, these are the improvement of the infrastructure and the organization of the Society itself, starting up CME and seminars in the towns of Serbia via Society's associated regional centers, the improvement of the internet website www.uksr.rs introducing the educational platforms for doctors as well as for patients, the introduction of the WGs in the activities of the Society translating guidelines and introducing educational content, and the latest CSS Board initiative to write a book of Cardiology 2018-2019 which would address unmet needs of the cardiologists of Serbia and whose authors would be the lecturers and the professors of all the Universities in Serbia.

At the Opening ceremony of the Congress following the tradition, our Society is going to give the rewards to young cardiologists for clinical work "Prof dr Dejan Boskovic", for interventional cardiology "Prof dr Srećko Nedeljkovic", and we shall introduce again the reward for the scientific work "Doc. dr Aleksandar Popovic".

Owing to the hard work and efficiency of the Post-doctoral cathedra of the Faculty of Medicine, University of Belgrade and the WG for Valvular heart diseases of the CSS, two translated pocket editions of ESC guidelines from 2017 for STEMI and valvular diseases are going to be presented. The full translation of other ESC guidelines will be published in our journal Heart and Blood Vessels.

The scientific programme has a very rich content, covering all current cardiological areas. It is going to be held in six conference halls that are named after the great people of the local regions of Zlatibor and Uzice. We would like to thank to everyone for organized and creating sessions, to all the authors sending their original works. We are very proud of sessions done with our colleagues from the region, European Society of Cardiology, Serbian Academy of Sciences and Arts, and to all other fellow organizations, societies and institutions taking part in the Congress.

During the last few years, CSS has been working a lot on raising the awareness of cooperation necessity, mutual support at all levels, as well as respecting others' initiative and opinion while sharing the same goals with the Society in order to put cardiology in Serbia on a higher level, making the prevention, diagnosis and treatment more successful for patients, and making the working environment more perspective for doctors and other health workers.

For visual identity of the Conference we have chosen the color of green from Zlatibor symbolizing peace and prosperity and the pattern of a typical roof of the ethnic house from Zlatibor as the Cardiology society of Serbia represents the covering organization for all the doctors and coworkers related to cardiology, together with circles of all of us stepping forward one medical mission.

We would like to thank to all pharmaceutical companies and the companies producing medical devices for their support and cooperation during the last two years. We assume the cooperation will be even more fruitful in future.

We wish you a pleasant time during the XXI Conference, hope you will enjoy the scientific programme and enjoy "après-ski" parties.

Kind regards,
Prof. dr Branko Beleslin, on behalf of the Board
President of the Cardiology society of Serbia

The football legend Sir Bobby Charlton once said that the public will always forgive if you have a shot and it misses but if you have the opportunity to shoot and don't take it, they will not forgive you.
